

Create a to-do list cli that contains the following commands :

1 - Users can add entry,

properties:

Title: indicates the title of entry, (required)

Example

node index.js add "To do entry"

Notes:

The entry should contain an incremental id

2 - Users Can list Entries

- All entries:

node index.js list

3 - Users can edit their entry through the id

- Make individual edits

properties:

title: for editing title (required)

id : id (required)

Examples

node index.js edit 123 "Edited title"

====> will edit entry with id 123 to be "Edited title"

4 - Users can delete their entry using their id

Example

node index.js delete 123

Bouns:

1 - Entries is added by default with status property which has "to-do" value

2 - edit

Users can mark their entry as done by id

Added properties :

Status: one of the values ["to-do", "in progress", "done"]

Examples:

node index.js edit 123 "Edited title" "done"

3 - list:

- Specific status

properties:

status: one of the values ["to-do", "in progress", "done"] (optional parameter)

Example:

node index.js list "done"

This should list all entries that have status done only.
